

ABSTRACT OF THE DISCLOSURE

545 a6
This filter-drier for removing moisture from a refrigerant includes a casing having an inlet for receiving refrigerant, an outlet for discharging and a molded core disposed in said casing between said inlet and said outlet. The molded core includes an outer surface at least in part engaging the inner surface of the casing. The core is held within said casing against axial movement by bonding with said casing or by an indentation protruding into said core or both.
